

# Software License Keys Database Documentation

## How to Boot Up Software License Keys Database for the First Time:

1. RDP to the server
2. Run CMD as administrator, if you see "C:\Windows\system32>" Type "cd.." to get you to the C root. Once you see "C:\>" then type cd users/public/documents/pycharmprojects/database. Once you see "C:\Users\Public\Documents\PycharmProjects\database>" then type "workon py1" hit enter.
3. If you see "<py1> C:\Users\Public\Documents\PycharmProjects\database>" then type "python manage.py runserver 7777"
4. Open XAMPP Control Panel, then start Apache and MySQL by pressing "Start" under Actions.
5. Leave it as is.

## How to Access the Database Itself:

1. Make sure you did all those steps above
2. Open Firefox Browser, then type <http://localhost:7777/admin/>
3. Under Key Tab, you can either choose Offices or Others
4. You can populate the database

Why use this database instead of keeping excel file? With this database, only certain people can access this database, there are multiple security check points to make sure whoever access this database is authorized. Furthermore, if someone gets into the excel file, that person can copy paste it less than 5 seconds and can delete it easily, but not with this database.

Remember to first turn on CMD with "python manage.py runserver 7777" command at the proper directory. Then turn on MySQL and Apache using XAMPP. If you didn't follow the exact steps, you wouldn't be able to access the database.
